INTRODUCTION

The release of the *Alabama Substance Abuse Data Book 2003* represents the third edition of this extensive information resource. Its purpose is to provide mental health professionals and other personnel in the social services sector with a comprehensive data book of substance abuse indicators. Statistical information concerning alcohol and drug abuse has been assembled for each of Alabama's 67 counties and brought together in one-stop, easy-to-use format. Statistical profiles are presented for each county and the state as a whole that include data on both the juvenile and adult sectors of the population. These profiles provide information over varying time periods (so that trends may be analyzed) and include substance abuse arrest data, data on juvenile substance use (as indicated by a recent Alabama school survey), juvenile court referral rates for substance abuse violations, motor vehicle fatality rates with alcohol involvement, alcohol sales figures, and alcohol and drug mortality data. Comparisons with statewide data, along with rankings of counties on various substance abuse indices, are also provided. Data from seven major agencies of Alabama state government are included in the database (Department of Public Health, Criminal Justice Information Center, Department of Public Safety, Administrative Office of Courts, Department of Youth Services, Alcoholic Beverage Control Board, and the Department of Mental Health and Mental Retardation), along with information from other sources (such as the U. S. Census Bureau and the U. S. Departments of Transportation, Justice, and Health and Human Services).

Like the second edition of the *Alabama Substance Abuse Data Book*, the third edition also attempts to assess the larger impact of substance abuse behavior on crime, safety, and health throughout the state. Thus, in addition to reporting arrest and mortality data that trace directly to substance abuse behavior (such as arrests for drunkenness and deaths from alcohol cirrhosis), estimates are provided concerning the extent to which other crimes and causes of death are alcohol and drug-related. These include, for example, the proportion of all homicides that trace to alcohol involvement (an estimated 30 percent) and the percentage of all Hepatitis C cases that are drug-related (estimated to be 36 percent). The impact of taking into consideration additional arrests and causes of death estimated to be alcohol and/or drug-related can be readily observed. For example, the average annual number of adult alcohol-specific arrests in Alabama during 1999-2001 was 31,712.3, but the average annual number of all adult arrests in which alcohol was involved was 41,303.8 (or 30 percent more). Likewise, the average annual number of alcohol-specific deaths in the state from 1999-2001 was 233.7, while the average annual number of all deaths attributable to alcohol was over nine times greater (or 2,128.6). For additional information concerning cause-specific versus all alcohol/drug-related arrests and causes of death, see the table at the end of the Executive Summary section of this report. The inclusion of this broader base of information was made possible by the publication of a recent report by Harwood, Fountain, Livermore entitled *The Economic Costs of Alcohol and Drug Abuse in the United States* (published by the U. S. Department of Health and Human Services, National Institutes of Health, Rockville, Maryland, in 1998).

Among changes that will be found in the third edition of the *Data Book* are updated county statistics from the 2000 census (which are reported in the "County Profiles" section) and the addition of several new demographic variables. Completely new to the 2003 edition (see County Profiles section) is data reported by twelfth students on the "lifetime use of selected substances." These data were extracted from a large-scale survey of public school students enrolled in grades 6-12 during the winter of 2002. Because of these and other improvements in the current edition (such as the use of new population estimates for figuring rates from earlier years and further refinement of substance abuse indices), the data contained herein are not always comparable with those reported earlier. The same relative differences that existed among counties for indicators reported in the earlier edition, however, should still be generally maintained.

This research was conducted by the Center for Demographic Research (CDR), Auburn University Montgomery, through a contract with the Alabama Department of Mental Health and Mental Retardation (DMH-MR). It builds upon a series of contracts between the CDR and DMH-MR over the last several years that have involved the development and enlargement of an “Alabama substance abuse database,” along with the construction of a series of county-based models of “substance abuse severity.” The current contract, in addition to the preparation of this publication, called for further development and refinement of existing substance abuse models (the result of which is reflected in this report). These projects, collectively referred to as “social indicator research,” represent one portion of a larger collection of studies that have been conducted on “substance abuse in Alabama.” These studies, entitled ***“State Demand and Needs Assessment Studies, Alcohol and Other Drugs,”*** were funded by the Center for Substance Treatment, U.S. Department of Health and Human Services, under Contract Nos. 270-93-005, and 270-93-008.

This report is organized under several main headings. A summary of the major findings and patterns that emerge from the data is presented in the next section entitled “Highlights.” This section of the report is followed by information concerning methodological procedures, the rationale that is used in the presentation of the data, and key points to consider in the interpretation of the information (see “How to Use This Book”). The state and county statistical profiles comprise the bulk of the report, followed by a county-by-county summary of the major variables that are included in the analysis and the rankings for each of the 67 counties on each variable. Comparisons of county rankings between 2000 and 2003, definitions of variables, and a listing of data sources are found at the end of the report.

The purpose of this report is to provide information that will enable the user to better understand the dimensions of the substance abuse problem within a particular county or region of the state. An analysis of the data contained in this publication will point to areas wherein additional steps can be taken to reduce alcohol and/or drug abuse. It will also highlight instances where progress has been made in reducing the threat of substance abuse and the negative behaviors that are associated with the misuse of alcohol and the illegal use of drugs. The lessons learned from these positive experiences can, theoretically, be applied to settings where progress is not as evident. The ultimate goal of this research is to not only improve the quality of life of those who are caught directly in the web of substance abuse, but their families, friends, and communities as well.

Executive Summary

(Except where noted, summary statements apply to the state as a whole.)

Substance Abuse Indices

The ten counties with the worst scores on the alcohol index from 1999-01 (listed in order) were Tallapoosa, Covington, Baldwin, Houston, Lauderdale, Autauga, Colbert, Wilcox, Chambers and Coosa. These counties are evenly divided between metropolitan counties (Baldwin, Houston, Lauderdale, Autauga and Colbert) and nonmetropolitan counties (Tallapoosa, Covington, Wilcox, Chambers and Coosa).

Sparsely populated, rural counties dominate the listing of those that scored best on the alcohol index. These include Choctaw, Bibb, Hale, Perry, Lamar, Pickens, Sumter and Winston. However, Montgomery County—the fourth most populous county in the state—registered one of the lowest scores of the state’s 67 counties.

Six of the ten counties with the worst scores on the drug index are metropolitan counties (i.e., Houston, Mobile, Jefferson, Montgomery, Autauga and Dale). Henry, Barbour, Pike, and Chambers counties also appear on the top 10 listing of worst scores.

Rural counties in the northern half of the state dominate the listing of those that scored best on the drug index. These include Bibb, Lawrence, Lamar, Jackson, Dekalb and Winston.

Of Alabama’s 67 counties, Houston County scored worst on the combined alcohol/drug index, while Bibb County scored best. Several metropolitan counties appear on the listing of worst scores (five of the top 10), but predominantly rural counties typically exhibit the best scores.

Juvenile Substance Abuse Indicators

Rates for all substance abuse indicators used in this report increased for Alabama’s youth between 1991-93 and 1999-01. The largest increases were associated with drug arrests and juvenile court referrals for drug violations.

Arrests for drug-specific violations (i.e., sale *and* possession of drugs) rose from an annual average rate of 115.6 per 100,000 population aged 10-17 in 1991-93 to 246.6 in 1999-01 (or by 113 percent). The arrest rate for alcohol-specific offenses, on the other hand, increased at a more modest pace (i.e., 5.7 percent).

The rate of court referrals reported by the Alabama Administrative Office of Courts and the Alabama Department of Youth Services for drug-specific violations nearly tripled from 1991-93 to 1999-01 increasing from 223.8 per 100,000 juveniles to 654.3. However, referrals for alcohol-specific violations increased only slightly (i.e., from 362.6 per 100,000 to 389.2).

The juvenile arrest rate for all alcohol *and* drug violations rose from an annual average of 855.9 per 100,000 in 1991-93 to 1,032.0 in 1999-01 (or by 21 percent). Likewise, court referrals for all alcohol *and* drug violations increased from 586.4 per 100,000 to 1,043.5 during that same period (78 percent).

An annual average of 5,175 juvenile arrests were made for all alcohol *and* drug-related violations during 1999-01 compared with 4,132 (or 1,043 fewer per year) from 1991-93. For court referrals to the Department of Youth Services, the corresponding averages are 5,232 from 1999-01 versus 2,831 from 1991-93 (or 2,401 more per year than during the earlier period).

Adult Substance Abuse Indicators

Adult arrest rates for all substance abuse indicators appearing in this report, except for those related to drug abuse, declined from 1991-93 to 1999-01.

Arrests for drug-specific violations in Alabama increased by an annual average of 75.6 per 100,000 population aged 18+ from 1991-93 to 1999-01 (or from 283.1 per 100,000 to 358.7), while the average annual arrest rate for alcohol-specific violations declined by 539.4 per 100,000 over that same period (from 1,493.9 per 100,000 to 954.5).

Overall, the adult arrest rate for all alcohol *and* drug violations dropped from an annual average of 2,396.5 in 1991-93 to 1,793.1 in 1999-01 (or by 25 percent).

An annual average of over 18,000 adult arrests for all drug-related violations were recorded in Alabama during 1999-01, while approximately 41,000 arrests for all alcohol-related offenses were reported. Arrests for all alcohol *and* drug-related violations, therefore, totaled nearly 60,000 during this period (of which 69 percent were alcohol-related).

Trend data for several counties (see charts in county profile section) indicate a complete convergence of juvenile and adult arrests for all alcohol and drug-related violations (e.g., Autauga, Jefferson, Madison, Mobile and Montgomery counties). In several other counties (precipitated mainly by declining adult arrests), juvenile and adult arrest rates are moving closer together. In three of the state's most populous counties (i.e., Mobile, Madison and Montgomery), juvenile arrest rates for alcohol/drug violations have surpassed adult arrest rates.

Other Substance Abuse Indicators

The average annual number of deaths in Alabama attributable to alcohol and drug abuse totaled 2,427 from 1999-01, up from 2,164 during 1991-93. Substance abuse deaths averaged approximately 54 per 1,000 total deaths each year during the 1999-01 time frame.

Residents of Alabama are about six times more likely to die from alcohol abuse than drug abuse. From 1999-01, alcohol-related deaths accounted for approximately 88 percent of all substance abuse deaths in the state.

The average number of persons who died each year in Alabama in alcohol-related motor vehicle accidents totaled 267 from 1999-01. An average of 6.0 persons per 100,000 population died from alcohol-related motor vehicle accidents during that period, a drop of 4.1 deaths per 100,000 (or 41 percent) from the 1991-93 period.

An annual average of 17,311 persons received treatment for substance abuse problems in state-supported facilities from 1999-01. This is up from an annual average of 15,594 during 1991-93.

Trend Data

The juvenile arrest rate for all alcohol *and* drug-related violations in Alabama has generally been on the increase during the last decade, except for the most recent period (i.e., 1999-01).

Much of the increase in alcohol and drug-related arrests over the last decade is accounted for by a rise in drug-related arrests. Juvenile drug-related arrests in Alabama totaled 413.0 per 100,000 persons aged 10-17 in 1991, but 500.2 in 2001 (a 21 percent increase). The alcohol-related arrest rate, in contrast, was 11 percent higher in 2001 than in 1991.

The adult arrest rate for all alcohol *and* drug-related violations, however, has moved in the opposite direction (i.e., from an annual average of 2,396.5 arrests per 100,000 persons aged 18+ in 1991-93 to 1,793.1 from 1999-01).

While all adult drug-related arrests increased from 515.2 per 100,000 persons aged 18+ in 1991 to 592.1 in 2001 (or by 76.9 per 100,000), alcohol-related arrests dropped from 1,987.3 per 100,000 persons in 1991 to 1,198.7 in 2001 (or by 788.6 per 100,000).

The ratio of all deaths in Alabama attributable to alcohol and drug abuse has remained basically unchanged during the 1990s at about 50-55 deaths for alcohol/drug-related causes per 1,000 total deaths.

Deaths from alcohol-related causes basically held steady from 1991 through 1998, but experienced an upswing in 1999. After declining for several years, deaths from drug-related causes also appear to be increasing.

The rate of death from alcohol-related motor vehicle accidents has declined significantly in recent years (i.e., from 9.8 per 100,000 population in 1996 to 5.4 in 2001).

The consumption of alcoholic beverages in Alabama from 1989-99 ranged from 1.93 gallons per person in 1990 to 1.77 gallons in 1991. The consumption level in 1999 (the latest year available) was 1.88 gallons per person.

Comparisons with National Data

Of eight substance abuse indicators examined in this report, U.S. rates were higher than those for Alabama during the most recent year on seven: juvenile arrests for all drug-related violations (631 more per 100,000 persons aged 10-17), juvenile arrests for all alcohol-related violations (+582 per 100,000), adult arrests for all drug-related violations (+284 per 100,000 persons aged 18+), adult arrests for all alcohol-related violations (+257 per 100,000), death rate from all drug-related causes (+1.0 per 100,000 persons), per capita consumption of alcohol beverages (by 0.3 gallons), and alcohol-related motor vehicle fatalities (+0.7 per 100,000 population). Alabama surpassed the U.S., however, in the death rate from all alcohol-related causes (i.e., by 8.9 deaths per 100,000 population).

From 1991 to 2001, the gap between the U.S. and Alabama has increased slightly for adult arrests for all alcohol-related violations. Since 1998, the gap has also increased for alcohol-related deaths. For other indicators, the difference between rates has either remained about the same (juvenile arrests for all alcohol-related violations, juvenile and adult arrests for all drug-related violations, and per capita consumption of alcoholic beverages) or narrowed (all drug-related deaths and alcohol-related motor vehicle fatalities).

The death rate from alcohol-related motor vehicle accidents in Alabama in 1997 was 55 percent higher than that for the U.S. (or 3.3 more deaths per 100,000 population). Alabama's rate has now dropped below that for the U. S. at nearly one death less per 100,000 population than the nation as a whole.

Comparison of Number of Alcohol and Drug-Abuse Specific Events with All Events

Associated With Alcohol and Drug Abuse, Alabama, 1999-2001

Juveniles	Average Number	Estimated Percent of All Arrests/Deaths
Alcohol-Specific Arrests	1,307.7	9.1
All Alcohol-Related Arrests	2,428.7	16.8
Drug-Specific Arrests	1,236.3	8.6
All Drug-Related Arrests	2,745.8	19.0
All Alcohol <i>and</i> Drug-Related Arrests	5,174.5	35.9
Adults		
Alcohol-Specific Arrests	31,712.3	16.7
All Alcohol-Related Arrests	41,303.8	21.7
Drug-Specific Arrests	11,917.7	6.3
All Drug-Related Arrests	18,268.7	9.6
All Alcohol <i>and</i> Drug-Related Arrests	59,572.5	31.3
Substance Abuse Mortality		
Alcohol-Specific Deaths	233.7	0.5
All Alcohol-Related Deaths	2,128.6	4.7
Drug-Specific Deaths	176.7	0.4
All Drug-Related Deaths	298.3	0.7

How to Use This Book

This report presents comprehensive information concerning a variety of factors that presumably reflect the extent of alcohol and drug abuse across Alabama counties. The latest available data (typically the 1999-2001 time period) are presented for Alabama and each of its 67 counties (see State and County Profiles on the following pages), along with comparative information from an earlier time period (usually beginning ten years earlier). In addition, statewide totals for the current time frame are provided so that data for individual counties can be compared to the state as a whole. Juvenile data appear first in the state and county profiles, followed by adult data and “other substance abuse indicators.”

Other items to consider in using this book include:

- Both disaggregated data (e.g., juvenile arrests for alcohol-specific violations, juvenile arrests for drug-specific violations, etc.) and aggregated data (e.g., juvenile arrests for alcohol *and* drug-specific violations) are presented in this report. In the case of aggregated data, the numbers and rates are cumulative. When the juvenile arrest rate for alcohol-specific violations is added to the juvenile arrest rate for drug-specific violations, for example, the total corresponds to the juvenile arrest rate for both alcohol *and* drug-specific violations combined (except for minor variations due to rounding). Likewise, the juvenile arrest rate for all alcohol violations combined with the juvenile arrest rate for all drug violations equals the juvenile arrest rate for all alcohol *and* drug violations (except for rounding). Other summary measures, in addition to the examples provided above, include DYS referrals for alcohol *and* drug-specific violations, adult arrests for alcohol *and* drug-specific violations, the alcohol *and* drug-specific mortality ratio, and the ratio of all deaths related to alcohol *and* drug abuse.
- Three index scores are presented in this report (see the first page of the county profiles)—an alcohol index score, a drug index score, and a composite alcohol-drug index score. Index scores for these three indices range from 100 (worst score) to the lowest calculated value (best score). The higher the index score, therefore, the greater the level of alcohol and/or drug abuse (i.e., based on the indicators that are used in this report). Conversely, the lower the index score, the lower the level of alcohol and/or drug abuse. See “Definition of Variables” at the end of this report for information concerning the development of these indices.
- Individual ranks are assigned to counties based on scores on the three indices (see above and the first page of the county profiles). The lower the number of the rank, the worse the score on the particular index under consideration (and vice versa). Tallapoosa County, for example, ranked first (or worst) in the state on the alcohol index with a score of 100.0. Bibb County, on the other hand, ranked 67th (or best) in the state with an alcohol index score of 8.9.
- The numbers and rates appearing in this data book are typically calculated over a three-year period and reported as “average annual numbers” or “average annual rates.” The average annual number of juvenile arrests for alcohol-specific violations in Alabama for 1999-01 was 1,307.7 per year, for example, while the average yearly rate during that period was 260.8 arrests per 100,000 persons aged 10-17. Rates can vary significantly from one year to the next, particularly in counties where the population base is small. Rates computed over a multi-year period, therefore, are generally more stable and more reflective of actual trends. The base period is 1991-93 and the current period is 1999-01 for all of the data presented in this report except per capita alcohol sales (which begin with the 1992-93 fiscal year and extend to 2001-02). Additional information concerning computational procedures may be found at the end of this report.

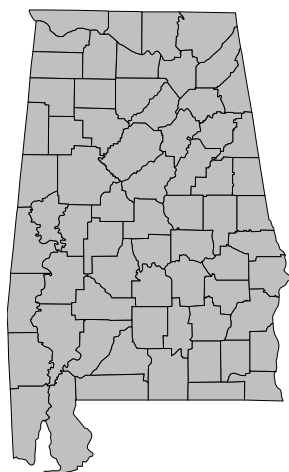

- All substance abuse indicators are reported in the form of rates per 100,000 total population or rates per 100,000 persons of a specified age except students reporting lifetime use of substances, per capita alcohol sales, and various measures of substance abuse mortality (i.e., alcohol mortality, drug mortality, and drug and alcohol mortality combined). Lifetime use of substances is reported as a percentage, per capita alcohol sales are presented as dollar amounts, while substance abuse mortality ratios represent the number dying from alcohol and/or drug-related causes per 1,000 total deaths.
- In some instances, the juvenile court referral number and rate for a specified indicator may be higher than the juvenile arrest rate. In addition to court referrals made directly by law enforcement officials, they may also be made by the victims themselves, parents and other relatives, school authorities, social service agencies, and other groups. As such, many of the court referral cases do not involve actual arrests.
- Nineteen counties in Alabama do not allow the sale of alcoholic beverages. The space allocated for “per capita alcohol sales” is indicated by a dash (-) in the profiles for these counties.
- Beginning in 1999, a new international system was implemented for the classification of diseases and causes of death. The new system, or “ICD-10,” is fundamentally different from the previous system (or “ICD-9”). While every attempt was made to classify alcohol and drug-related causes of death for 1999-2001 in the same manner as those occurring between 1991 and 1998, data over the two periods may not be totally comparable. This possibility should be considered, therefore, when comparing alcohol and drug mortality frequencies/rates for 1999-2001 with those from earlier years.
- Under “Comparisons with State Data” (see second page of the county profiles), the “Best 20 Percent of All Counties” refers to the 13 counties with the *lowest* rates or ratios compared to other counties on one or more of the following variables: (1) all juvenile arrests related to alcohol; (2) all juvenile arrests related to drugs; (3) juvenile court referrals for alcohol-specific violations; (4) juvenile court referrals for drug-specific violations; (5) all adult arrests related to alcohol; (6); all adult arrests related to drugs; (7) ratio of all deaths related to alcohol abuse; (8) ratio of all deaths related to drug abuse; and (9) alcohol-related motor vehicle fatalities. The “Worst 20 Percent of All Counties,” on the other hand, refers to the 13 counties with the *highest* rates or ratios compared to other counties on one or more of the nine variables listed immediately above. Because of space limitations, not all of the variables that are included in other sections of the county profiles are addressed in this portion of the analysis. More specifically, summary variables—such as all juvenile arrests related to alcohol and drugs, all adult arrests related to alcohol and drugs, etc.—have been excluded, along with per capita alcohol sales and admissions for substance abuse treatment. The factors that are presented, however, should provide a relatively good indication of areas wherein a county varies significantly (either in a positive or negative direction) from the mean.
- Because of the wide variation in arrest rates across the state, it was not always possible to use the same scale in the charting of juvenile and adult arrest rates (see bottom of second page of county profiles). The attempt was made to maintain the same scale, however, wherever possible.
- As a result of spacial constraints, the Y-axis of each chart appearing in this book (except for per capita consumption of alcohol) is labeled “Rate per 100,000.” The reference is to 100,000 persons, either in the total population or a specified age group within the population.

- Counties are ranked on various indices and indicators throughout this report. When two or more counties have the same index score or rate, they are assigned the same numerical rank. The next county in the ranking sequence receives a numerical rank that corresponds to the next available number after taking ties into consideration. If two counties share the rank of “2,” for example, the next numerical rank that is assigned is “4” and the number “3” will not appear in the ranking sequence. When one or more counties are tied for the best rates out of the state’s 67 counties, the final numbers that appear in the ranking sequence will be less than 67. Also, there are 19 counties in Alabama that do not allow alcohol beverages to be sold. Per alcohol sales rankings, therefore, stop at 48.
- In some instances, comparable information could not be secured for the United States in the “State Profile” section of the data book. Where data could not be obtained a dash (-) has been placed in the appropriate space.
- Definitions of the variables used in this report, formulas for computing rates and ratios, and bibliographic information, are provided at the end of the report.
- Assistance with the analysis and interpretation of the data appearing in this report, and/or other information, may be obtained by contacting the Center for Demographic Research, Auburn University Montgomery, Post Office Box 244023, Montgomery, Alabama 36124-4023; Telephone 334-244-3463.
- **The substance abuse information appearing in this book (i.e., juvenile and adult arrests, juvenile court referrals, substance abuse mortality, lifetime use of substances, alcohol-related motor vehicle fatalities, and admissions for substance abuse treatment) reflect data *reported* by agency representatives through official sources. No adjustments were made for possible undercounting or other potential irregularities.**

Key to Variables in “County Rankings and County Data” Section

JALS	Juvenile Arrests for Alcohol-Specific Violations
JRAL	All Juvenile Arrests Related to Alcohol

Comparisons With National Data, 1991-2001

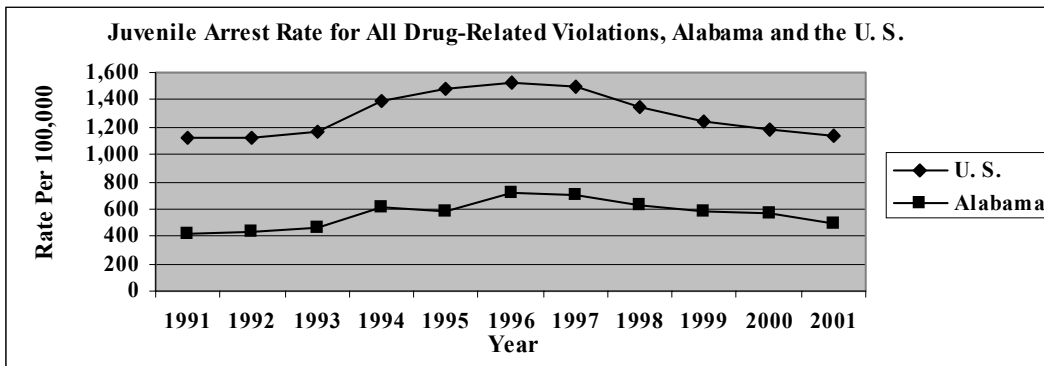

Alabama's juvenile arrest rate for all alcohol violations has been on the decline since 1998, dropping by 86 arrests per 100,000 persons aged 10-17 over the last four years.

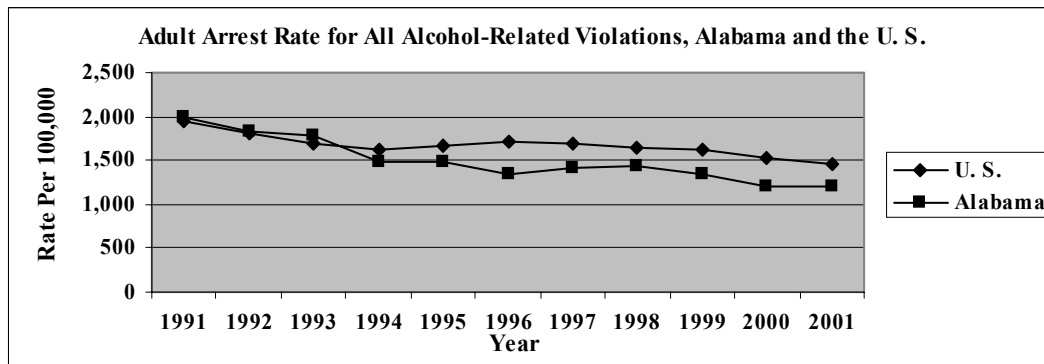

* Data reported are for 1999-00.

** Data reported for all state and county profiles are for 2000-02.

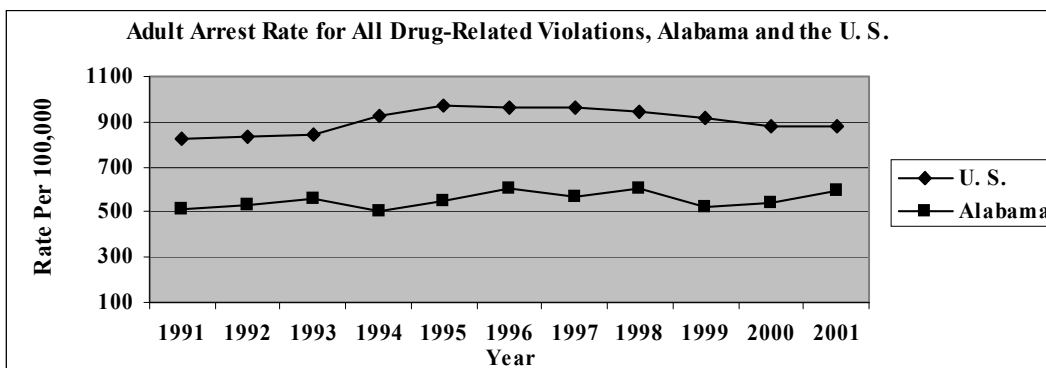

Comparisons With National Data (Continued)

Juvenile arrest rates for all drug-related crimes have declined each year since 1996. The U.S. rate, however, remains about twice as high as the Alabama rate.

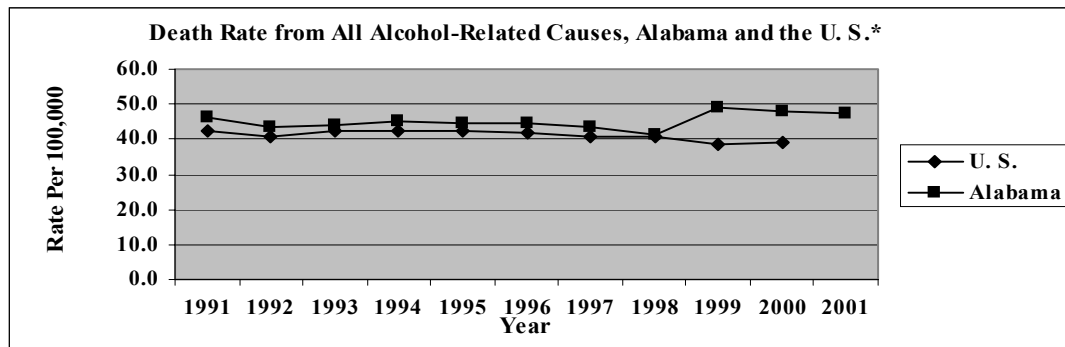

The state's adult arrest rate for all alcohol-related violations closely parallels that for the U.S. Since 1993, however, the Alabama rate has remained below the U.S. rate.

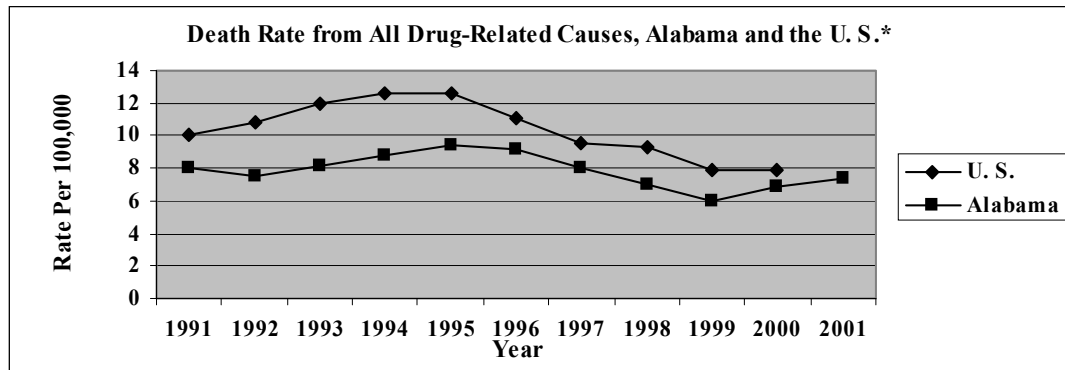

The Alabama adult arrest rate for all drug-related violations has followed an uneven course over the last several years, but is currently on the rise.

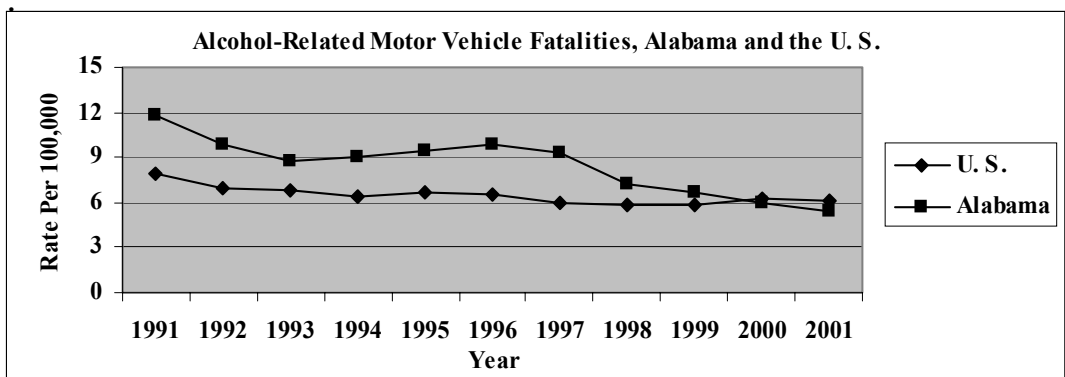

Comparisons With National Data (Continued)

Alabama's death rate from all alcohol-related causes has increased noticeably since 1998 and is now 23 percent higher than the U.S. rate.

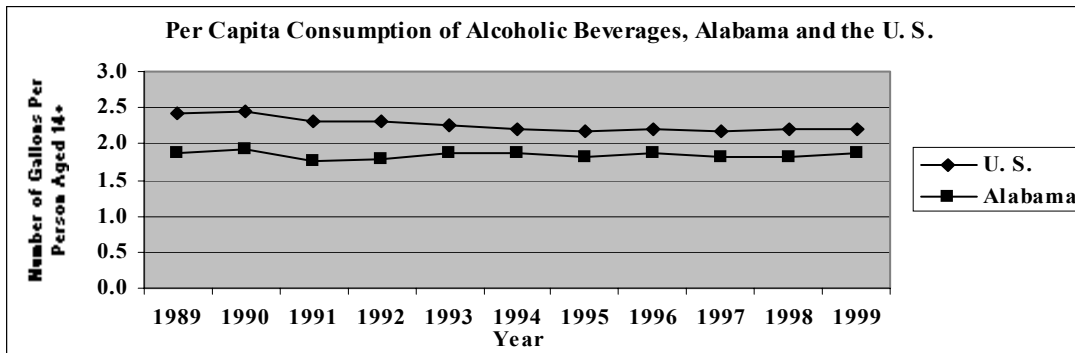

After several years of decline, Alabama's death rate from all drug-related causes appears to be on the increase. The Alabama rate is now 87 percent of the U.S. rate.

Alabama's rate of alcohol-related motor vehicle fatalities, which is now below that for the U.S., has declined by 45 percent since 1996.

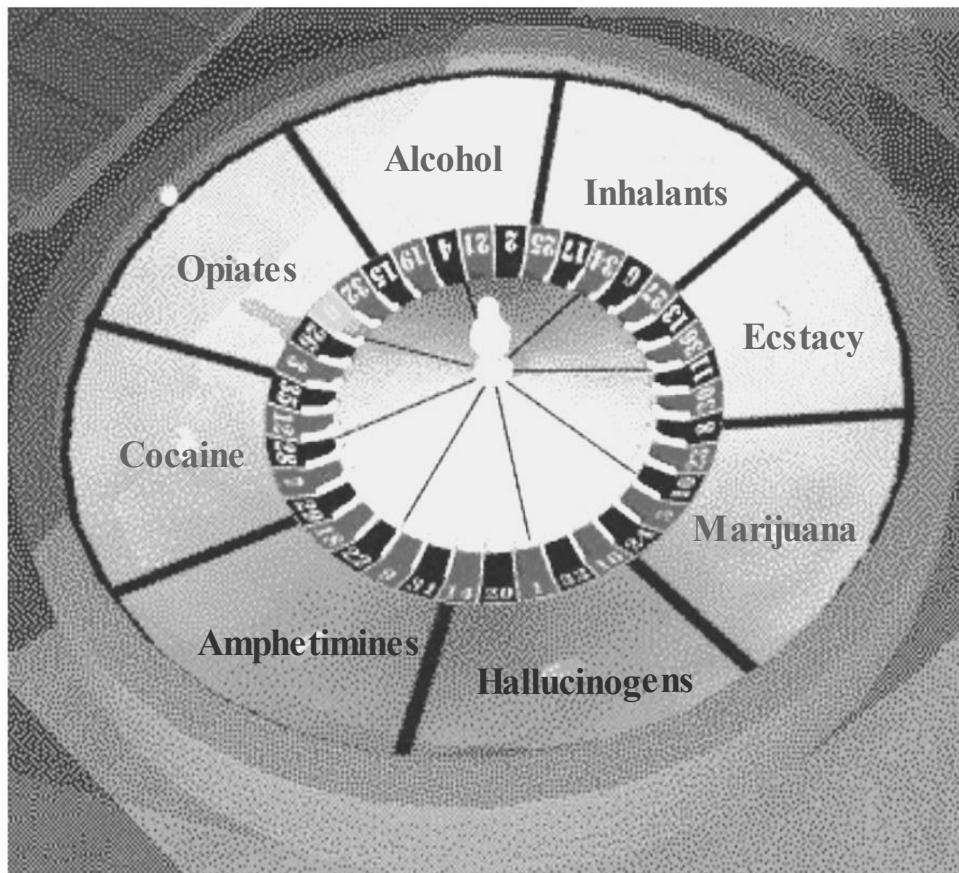

*Data are not available for the U. S. for 2001

Comparisons With National Data (Continued)

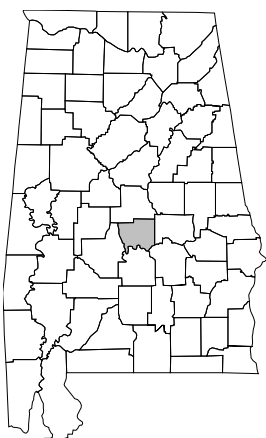

Alabama residents consumed an average of nearly two gallons of alcoholic beverages per person in 1999, or about 15 percent less than that for the U.S. as a whole.

Note: The factors used in developing the composite alcohol/drug index for the 2003 Alabama Substance Abuse Data Book vary slightly from those used in the 2000 Alabama Substance Abuse Data

Book.

Differences in rankings, therefore, may trace partly to the use of different index factors over the two time periods.

*Based on average annual rates for 1996-1998.

**Based on average annual rates for 1999-2001.

Definition of Variables

(Listed in Order of Appearance for County Profiles)

Percent Urban

“Urban,” according to the U. S. Census Bureau definition, includes all territory, population, and housing units located within “urbanized areas” and “urban clusters.” An “urbanized area” consists of densely settled territory that contains 50,000 or more people. An “urban cluster” consists of densely settled territory that has at least 2,500 people but fewer than 50,000 people.

Median Household Income

The point at which half of the households are above the specified income level and half of the households are below. A household is comprised of all individuals (whether one person or several) who occupy a given dwelling unit.

Percent Below Poverty Level

The percentage of persons determined to be below the poverty level in the last U. S. Census. The poverty threshold for a family of four (i.e., two adults and two children under 18) was \$16,859 in 1999.

Alcohol Index

The alcohol index for Alabama counties is comprised of six equally-weighted factors: the alcohol-specific mortality ratio, adult arrest rate for driving under the influence of alcohol, adult arrest rate for public drunkenness, adult arrest rate for disorderly conduct, rate of juvenile arrests for alcohol-specific offenses (i.e., public drunkenness, driving under the influence of alcohol, and the violation of liquor laws), and the rate of juvenile court referrals for alcohol-related violations (public drunkenness, driving under the influence, and the violation of liquor laws). These variables were selected for inclusion in the alcohol index through an item analysis utilizing correlation techniques. Individual scale scores were standardized across counties and combined into a single index. Scores on the alcohol index for individual counties range from 100.0 in Tallapoosa County (highest or worst score) to 5.6 in Choctaw County (lowest or best score).

Drug Index

The drug index was formulated in a manner similar to the alcohol index and is comprised of four equally-weighted variables: adult arrest rate for the sale and possession of drugs, juvenile arrest rate for the sale and possession of drugs, the drug mortality ratio (which includes drug-specific deaths and other causes of death estimated to be drug-related), and the cumulative number of persons diagnosed with AIDS per 100,000 population. Scores on the drug index for individual counties range from 100.0 in Houston County (highest or worst score) to 9.9 in Bibb County (lowest or best score).

Composite Alcohol/Drug Index

The composite alcohol/drug index is composed of the six variables that comprise the alcohol index and the four variables that form the drug index. All 10 variables are equally weighted, with the combined scale scores for individual counties ranging from 100.0 in Houston County (highest or worst score) to 10.9 in Bibb County (lowest or best score).

Juvenile Arrests for Alcohol-Specific Violations

Average annual number of arrests for public drunkenness, driving under the influence of alcohol, and the violation of liquor laws per 100,000 persons aged 10-17 for the period specified (i.e., 1991-93 or 1999-01).

Juvenile Arrests for All Alcohol-Related Violations

Average annual number of arrests for alcohol-specific violations (see above), plus the estimated number of other juvenile crimes that are associated with the use of alcohol (e.g., 30 percent of all aggravated assaults), per 100,000 persons aged 10-17 for the period specified (i.e., 1991-93 or 1999-01).

Juvenile Arrests for Drug-Specific Violations

Average annual number of arrests for the sale *and* possession of illegal drugs per 100,000 persons aged 10-17 for the period specified (i.e., 1991-93 or 1999-01).

Juvenile Arrests for All Drug-Related Violations

Average annual number of arrests for drug-specific violations (see above), plus the estimated number of other juvenile crimes that are associated with the use of illegal drugs (e.g., 27 percent of all robberies) per 100,000 persons aged 10-17 for the period specified (i.e., 1991-93 or 1999-01).

Juvenile Arrests for Drug and Alcohol-Specific Violations

Average annual number of arrests for drug *and* alcohol-specific violations per 100,000 persons aged 10-17 for the period specified (i.e., 1991-93 or 1999-01).

Juvenile Arrests for All Alcohol and Drug-Related Violations

Average annual number of all alcohol *and* drug-related violations per 100,000 persons aged 10-17 for the period specified (i.e., each three-year period between 1991 and 2001).

Juvenile Court Referrals for Alcohol-Specific Violations

Average annual number of juvenile court referrals reported by the Alabama Administrative Office of Courts (1999-01) and the Alabama Department of Youth Services (1991-93) for public drunkenness, driving under the influence of alcohol, and the violation of liquor laws per 100,000 persons aged 10-17.

Juvenile Court Referrals for Drug-Specific Violations

Average annual number of juvenile court referrals reported by the Alabama Administrative Office of Courts (1999-01) and the Alabama Department of Youth Services (1991-93) for the sale and possession of illegal drugs per 100,000 persons aged 10-17.

Juvenile Court Referrals for All Alcohol and Drug Specific Violations

Average annual number of juvenile court referrals reported by the Alabama Administrative Office of Courts (1999-01) and the Alabama Department of Youth Services (1991-93) for alcohol *and* drug-specific violations per 100,000 persons aged 10-17.

Lifetime Use of Selected Substances

Percent of twelfth grade students reporting the use of alcohol, marijuana, inhalants, hallucinogens, cocaine, and/or other drugs (e.g., steroids, opiates, etc.) at least one time during their lifetime. These data were collected through a survey of students enrolled in Alabama public schools during January and February, 2002. The designation “NA” refers to “not available,” indicating that the data were suppressed either due to a lack of sufficient data or unacceptably high variability in the data.

Adult Arrests for Alcohol-Specific Violations

Average annual number of arrests for public drunkenness, driving under the influence of alcohol, and the violation of liquor laws per 100,000 persons aged 18+ for the period specified (i.e., 1991-93 or 1999-01).

Adult Arrests for All Alcohol-Related Violations

Average annual number of arrests for alcohol-specific violations (see above), plus the estimated number of other adult crimes that are associated with the use of alcohol (e.g., 30 percent of all homicides committed by adults), per 100,000 persons aged 18+ for the period specified (i.e., 1991-93 or 1999-01).

Adult Arrests for Drug-Specific Violations

Average annual number of arrests for the sale *and* possession of illegal drugs per 100,000 persons aged 18+ for the period specified (i.e., 1991-93 or 1999-01).

Adult Arrests for All Drug-Related Violations

Average annual number of arrests for drug-specific violations (see above), plus the estimated number of other adult crimes that are associated with the use of illegal drugs (e.g., 30 percent of all burglaries) per 100,000 persons aged 18+ for the period specified (i.e., 1991-93 or 1999-01).

Adult Arrests for Alcohol and Drug-Specific Violations

Average annual number of arrests for drug *and* alcohol-specific violations per 100,000 persons aged 18+ for the period specified (i.e., 1991-93 or 1999-01).

Adult Arrests for All Alcohol and Drug-Related Violations

Average annual number of all alcohol *and* drug-related violations per 100,000 persons aged 18+ for the period specified (i.e., each three-year period between 1991 and 2001).

Per Capita Alcohol Sales

Annual alcohol sales made through Alabama Alcoholic Beverage Control Board stores for the fiscal year under consideration divided by the total population. Data reported are for the 1992-93 and 2001-02 fiscal years.

Alcohol-Specific Mortality Ratio

Average annual number of deaths from alcohol-induced causes per 1,000 deaths from all causes for the period specified (i.e., 1991-93 or 1999-01).

Drug-Specific Mortality Ratio

Average annual number of deaths from drug-induced causes per 1,000 deaths from all causes for the period specified (i.e., 1991-93 or 1999-01).

Alcohol and Drug-Specific Mortality Ratio

Average annual number of deaths from alcohol *and* drug-induced causes (see above) per 1,000 deaths from all causes for the period specified (i.e., 1991-93 or 1999-01).

Ratio of All Deaths Related to Alcohol Abuse

Average number of deaths that are specifically attributable to alcohol abuse (e.g., alcoholic cirrhosis), plus the estimated number of other deaths that are alcohol-related (e.g., 75 percent of all esophagus cancer) per 1,000 deaths from all causes for the period specified (i.e., 1991-93 or 1999-01).

Ratio of All Deaths Related to Drug Abuse

Average number of deaths that are specifically attributable to drug abuse (e.g., drug psychoses), plus the estimated number of other deaths that are drug-related (e.g., 32 percent of AIDS deaths) per 1,000 deaths from all causes for the period specified (i.e., for each three-year period between 1991 and 2001).

Alcohol-Related Motor Vehicle Fatalities

Average annual number of alcohol-related motor vehicle fatalities per 100,000 persons for the period specified (i.e., 1991-93 or 1999-01).

Admissions for Alcohol/Drug Treatment

Average annual unduplicated admission counts for alcohol and/or drug treatment in state supported facilities per 100,000 persons aged 15+ for 1991-93 and 2000-02. Data are reported by the county of residence of the person receiving assistance.

Juvenile Alcohol/Drug Arrest Rate

Same as “All Juvenile Arrests Related to Alcohol & Drugs.” See above.

Adult Alcohol/Drug Arrest Rate

Same as “All Adult Arrests Related to Alcohol & Drugs.” See above.

Alcohol/Drug Mortality Ratio

Same as “Ratio of All Deaths Related to Alcohol and Drug Abuse.” See above.

Death Rate from All Alcohol-Related Causes (See chart located in “State Profile Section”)

Same as the “Ratio of All Deaths Related to Alcohol Abuse,” except that the average annual number of deaths from alcohol-related causes is divided by the total population instead of the total number of deaths. The death rate from alcohol-related causes is computed per 100,000 population.

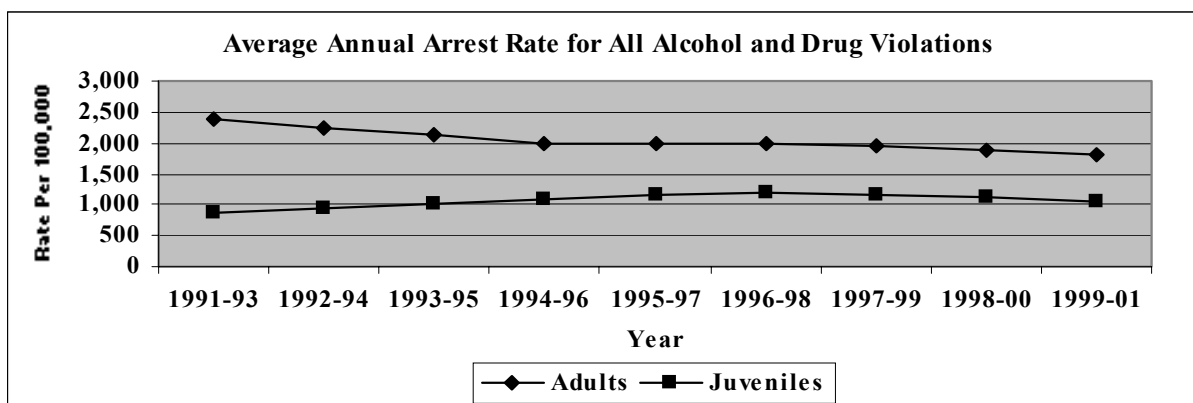

Death Rate from All Drug-Related Causes (See chart located in “State Profile Section”)

Same as the “Ratio of All Deaths Related to Drug Abuse,” except that the average annual number of deaths from all drug-related causes is divided by the total population instead of the total number of deaths. The death rate from drug-related causes is computed per 100,000 population.

Per Capita Consumption of Alcoholic Beverages (See chart located in “State Profile Section”)

Total number of gallons of ethanol consumed from beer, wine, and spirits divided by the total population aged 14 years old and over.

Arrest data for juveniles and adults, juvenile court referrals, per capita alcohol sales, and alcohol-related motor vehicle fatalities are reported by place of occurrence. All other variables (i.e., alcohol mortality, drug mortality, and admissions for alcohol/drug treatment) are tabulated by place of residence).

Sources of Information

(Listed in Order of Appearance for County Profiles)

Demographic Data

Population estimates for 2002 are from: Population Division, U.S. Census Bureau, ***Alabama County Population Estimates: April 1, 2000 to July 1, 2002***, Table CD-EST2002-01-01, released April, 2003. Data regarding the other demographic variables (except population rank and percent change in population) are from: U.S. Census Bureau, ***2000 Census of Population and Housing***, Summary File 1, Tables P1 (total population for 2000), P2 (percent urban), P7 (percent white/black), and P12 (number and percent under 18 and 18+); and Summary File 3, Tables P52 (median family income) and P87 (percent below poverty). "Population rank in 2000" and "percent change in population" were prepared by the Center for Demographic Research, Auburn University Montgomery.

Juvenile and Adult Arrest Data

Unpublished data provided by the Alabama Criminal Justice Information Center, Montgomery, Alabama for 1991 through 2001.

Juvenile Court Referral Data

Alabama Department of Youth Services, Mt. Meigs, Alabama, annual editions of the ***Juvenile Statistical Report*** for 1991 through 1997; and the Alabama Administrative Office of Courts, unpublished data for 1998 through 2001.

Lifetime Use of Selected Substances Reported by Twelfth Grade Students

Alabama Department of Mental Health and Mental Retardation, ***Alabama Student Survey of Risk and Protective Factors***, P. Allison Minugh, Nicoletta Lomuto, Beth Kellerman, and Jason Machan, published by the Substance Abuse Services Division, ADMH-MR, Montgomery, Alabama, 2002.

Per Capita Alcohol Sales

Alabama Alcoholic Beverage Control Board, Montgomery, Alabama, ***Statistical Reports*** for 1992-93 and 1993-94; ***Annual Reports*** for 1994-95 through 1998-99; and unpublished reports for 1999-2000 through 2001-2002.

Alcohol and Drug Mortality

Unpublished data provided by the Center for Health Statistics, Alabama Department of Public Health, Montgomery, Alabama.

Crime and Death Estimates Related to Alcohol and Drug Abuse

Alcohol-specific and alcohol-related crimes and causes of death, as well as drug-specific and drug-related crimes and causes of death, were tabulated according to the guidelines presented in ***The Economic Costs of Alcohol and Drug Abuse in the United States, 1992*** by Henrick Harwood, Douglas Fountain, and Gina Livermore (published by the U.S. Department of Health and Human Services, National Institutes of Health, Rockville, Maryland). A listing of these guidelines may be obtained by contacting the Center for Demographic Research, Auburn University Montgomery.

Alcohol-Related Motor Vehicle Fatalities

Unpublished data provided by the Alabama Department of Public Safety, Fatality Analysis Reporting System, Montgomery, Alabama.

Substance Abuse Treatment Data

Annual editions of ***Client Admission Profile*** for the 1991-92 through 1995-1996 fiscal years published by the Alabama Department of Mental Health and Mental Retardation, Montgomery, Alabama. Data provided in electronic file format by the Alabama Department of Mental Health and Mental Retardation for the 1996-97 through 2000-02 fiscal years.

U. S. Data Contained in the State Profile

Annual editions of ***Crime in the United States*** for 1991-2001 published by Federal Bureau of Investigation, U. S. Department of Justice, Washington, D. C. (Juvenile and Adult Arrest Data)

U. S. Department of Health and Human Services, National Center for Health Statistics, “Total Deaths for Each Cause by Five-Year Age Groups, United States, 1993, 1994, 1995, 1996, 1997, 1998, 1999, and 2000,” National Center for Health Statistics Website, <<http://www.cdc.gov/nchs/>>. (Substance Abuse Mortality Data)

U. S. Department of Transportation, National Center for Statistics and Analysis, ***Traffic Safety Facts, 2001***, DOT HS 809 484, December, 2002, Table 13. (Alcohol-Related Motor Vehicle Fatalities)

U. S. Department of Health and Human Services, National Institute on Alcohol Abuse and Alcoholism, ***Apparent Per Capita Alcohol Consumption: National, State, and Regional Trends, 1977-99***, Surveillance Report #59, September, 2002, Table 3. (Per Capita Alcohol Consumption)

Acknowledgements

A number of individuals and state agencies were instrumental in supplying the data that appear in this publication. These include Carol Roberts, Alabama Criminal Justice Information Center; Albert Woolbright, Center for Health Statistics, Alabama Department of Public Health; Cary McMillan, Alabama Administrative Office of Courts; John Tranter and Paul Thornton, Alabama Alcoholic Beverage Control Board; William Shanks, Alabama Department of Public Safety; and the Office of Research, Evaluation, and Information, Alabama Department of Mental Health and Mental Retardation. Appreciation is expressed to all these persons and the agencies they represent for their helpful assistance in obtaining data for this project. Likewise, we are grateful to Harry Brantley for the development of the cover design. Our thanks also to J. Kent Hunt, Associate Commissioner for Substance Abuse, Alabama Department of Mental Health and Mental Retardation, for his general support of this project and for providing the financial support that was necessary to make the third edition of the *Alabama Substance Abuse Data Book* a reality.

Finally, special thanks and appreciation is extended to Joseph Drop, Chief of the Office of Research, Evaluation and Information, Alabama Department of Mental Health and Mental Retardation. As our primary contact within the Department, Mr. Drop has provided valuable assistance and timely encouragement to us throughout all three editions of this publication.
